

Stakeholder demo script

Top1Movers Operations Portal (mockup) | a shipment's life, from inquiry to money settled

About 27 minutes of demo plus 10 minutes for questions. Presenter copy.

The storyline in one breath

We follow a client's imported shipment through the company. A coordinator turns an inquiry into a job. The customer can see it on a tracking page. Paperwork is checked, customs delays are caught, and the warehouse confirms delivery with proof. A manager keeps the client's money straight, and Finance receives a clean handoff. Every step leaves a trace an admin can audit.

How the demo is built

Act 1 creates a brand-new job live, so the audience sees the real starting point. To keep the demo short, the later acts use jobs that are **already at the right stage** in the sample data (like a cooking show: "here is one I prepared earlier"). Say this out loud once, so nobody wonders why the job number changes. The full live replay of one shipment, step by step, is journey E2E-01 in the test workbook, which is better for a hands-on working session than a presentation.

Run of show

#	Act	Signed in as	Time	Main message
0	Opening	Sign-in screen	1.5 min	One record per shipment; everything is mock data.
1	From inquiry to job	Dispatcher (Ana Cruz)	4 min	Quote to job with no re-typing.
2	The customer's window	Dispatcher, then public page	2 min	Status changes reach the customer instantly.
3	Paperwork under control	Dispatcher	2.5 min	Missing and rejected documents cannot hide.
4	The manager's morning	Manager (Grace Tan)	2 min	One screen shows what needs attention.
5	Customs and things going wrong	Dispatcher, then Manager	4 min	Delays are visible, owned and controlled.
6	Delivery from the floor	Warehouse Crew (Ben Santos)	2.5 min	Proof of delivery is required, not optional.
7	The client's money	Manager, then Finance (Paolo Reyes)	5 min	Warnings before fees; a clean handoff to Finance.
8	Accountability	Admin (Mark Villar)	1.5 min	Who did what, when, and what each person may see.
9	Close	Any	1.5 min	Recap, what is not built, next steps.

Before you present

Set-up checklist (10 minutes, the day before and again 15 minutes before)

- Use **Chrome or Edge**, full screen, browser zoom 100%, laptop or projector at about 1440 px wide. Hide the bookmarks bar.
- Open `apps/mockup/index.html` in **one tab only** and press **F5** for fresh data. Data lives inside the open page, so a second tab or window has its own separate data and will not know what you did.
- Do one full dry run. The demo depends on the sample data being untouched, so press F5 again after the dry run.
- Remember the mockup's clock is fixed at **Monday 28 September 2026**. Do not mention today's real date; "overdue" and "days left" all assume the fixed date.
- Know where the role switch is: click your **avatar (top right)** and choose **Demo: switch role**. It changes the signed-in person without signing out, which keeps the demo moving. The same menu has **Sign out**.
- Keep this script open on a second screen or printed. Keep the workbook's Test Data sheet within reach for job numbers.

Rules of the road

- Do **not** click Open or View on any document or receipt. They are pretend and only show a message. The one real file is the sample PDF on job **SJ-2026-00101**.
- If something goes wrong, press **F5** and restart from the act you were on. The data resets, so an act that changed something (Act 1, 3, 5, 6, 7) is best restarted from its beginning.
- The customer tracking page opens with **Client tracking page** on the job header. Use the browser's **Back** button to return.
- Say "mock data" and "illustrative" when it matters. The screens already carry those labels, so point at them rather than apologising.

Sample jobs used in the demo

Job	Used in	Why it is useful
INQ-2026-0043 (Pacific Rim)	Act 1	A new inquiry that becomes a new job, SJ-2026-00123, live.
SJ-2026-00088	Act 2	A ship at sea. Moving it to Arrived at Port shows on the customer page.
SJ-2026-00095	Act 3	Bill of Lading waiting for review, Certificate of Origin rejected with a reason, Import Permit missing.
SJ-2026-00130	Act 5	Customs Red lane, Under Inspection. Urgent.
SJ-2026-00065	Act 5	Exception hold (HS code mismatch) and a customs payment waiting on the client.
SJ-2026-00077	Act 6	Out for delivery, waiting for the warehouse to confirm.
SJ-2026-00120	Act 7	Short on funds: duty due 30 Sep, PHP 8,400 short, storage fees start in 2 days.
SJ-2026-00070	Act 7	A surprise extra storage fee and a payment with no receipt.
SJ-2026-00060	Act 7	Ready for Finance, with a refund due to the client.
SJ-2026-00101	Act 7	Balance owed by the client, plus the real sample PDF.

Fix before presenting (recommended). The sample PDF for SJ-2026-00101 still shows margin as PHP 20,600 (11.8%) while the screen now shows PHP 3,500 (2.3%). This is known issue KL-02. Either regenerate the PDF before the demo, or avoid discussing margin numbers while the PDF is open. Similarly, be ready for the question "can a Dispatcher see all jobs?" (today: yes, in the job list; only the dashboard is limited, known issue KL-09).

ACT 0 | Opening

Sign-in screen | about 1.5 min

Goal: Set the scene and the honesty level: this is a working mockup with made-up data.

Do (click path)	Say (talk track)	Point out
Have the sign-in screen up. Do not sign in yet.	<i>"Today, following a shipment means folders, spreadsheets and email. If someone asks where a container is, or whether we already billed a fee, people go digging. This portal gives every shipment one record, from the first inquiry to the final bill, so anyone can see where it is, what is stuck and what will cost money."</i>	The Mockup only notice on the screen.
Point at the screen or briefly at the Track a shipment link.	<i>"Everything you will see is sample data. Nothing is saved and nothing is connected to real systems. What we want your reaction to is the flow, the wording and who sees what."</i>	Set the expectation that feedback is welcome.

ACT 1 | From inquiry to job

Dispatcher (Ana Cruz) | about 4 min

Goal: Show that a quotation becomes a shipment job with no re-typing, and that history is kept.

Do (click path)	Say (talk track)	Point out
Click Sign in with Microsoft , pick the Dispatcher row (Ana Cruz).	<i>"Ana is a dispatcher. She runs the work for her customers. She lands on her task list."</i>	The My Tasks page, grouped by urgency.
Sidebar: Inquiries & Quotations . Open INQ-2026-0043 (Pacific Rim, status New).	<i>"A client, Pacific Rim, has asked for a price to bring goods in. The inquiry is registered and checked for missing information."</i>	Status New .
Click Create quotation .	<i>"One click creates the quotation, version 1, at PHP 150,000."</i>	QT-2026-0044, v1, PHP 150,000.00, status Pending customer approval .
Optional (20 seconds): click Add revision , then click the v1 and v2 tabs.	<i>"If the client negotiates, we make a new version. The old one is never overwritten."</i>	v1 is unchanged. Skip if you are short on time.
Click Record customer approval / conforme . Approved by: Liza Fernandez . Click Save conforme .	<i>"The client signs to accept. We record who approved and when. This is the moment the commercial side ends."</i>	Green box Customer approval recorded .
Click Convert to Shipment Job . Read the page, then click Create Shipment Job .	<i>"Now the magic: nothing is re-typed. Customer, cargo, route and price all carry over."</i>	The No re-keying needed banner.
On the new job SJ-2026-00123 , scroll through the header, journey bar and tabs. Open the Documents tab.	<i>"This is the Shipment 360 view: one record for the whole shipment. The job starts at Booked, with the five required documents listed as Missing and the standard to-do list already created."</i>	Status Booked ; five documents Missing ; job history shows Job created by Ana Cruz (Dispatcher).

ACT 2 | The customer's window

Dispatcher, then public page | about 2 min

Goal: Show that a status change reaches the customer, without giving them access to internal details.

Do (click path)	Say (talk track)	Point out
On SJ-2026-00123 click Client tracking page in the job header.	<i>"Customers never log in. They get this page. Look what they see for the new job."</i>	Headline Booked : "Your booking is confirmed." ETA to be confirmed.
Use the browser Back button. Open Shipment Jobs , open SJ-2026-00088 (Sailed).	<i>"Here is a ship at sea. It has just arrived in Manila, so Ana updates the status."</i>	Only the <i>next</i> stage is selectable (see next step).
Click Update status . Read the list, then Confirm the move to Arrived at Port .	<i>"The system only lets you move to the next step. You cannot skip ahead by accident."</i>	Earlier steps say "already completed", later ones "locked".
Click Client tracking page again.	<i>"And the customer sees it immediately. No phone call, no email."</i>	Headline now Arrived at port ; earlier steps ticked.
Back on the jobs list, point at the Flags column.	<i>"Notice the clocks. Storage at the port is free for a few days, then fees start. The portal warns us before that happens."</i>	Free storage expired 2d ago (SJ-2026-00082), Free storage: 1d left (SJ-2026-00065).

ACT 3 | Paperwork under control

Dispatcher (Ana Cruz) | about 2.5 min

Goal: Show the document checklist, rejection with a reason, and how missing paperwork surfaces.

Do (click path)	Say (talk track)	Point out
Open SJ-2026-00095 (Golden Harvest), then the Documents tab.	<i>"Every shipment has a paperwork checklist. Here, one document is waiting for review, one was rejected, and one is still missing."</i>	Bill of Lading Pending Review ; Certificate of Origin Rejected with a reason; Import Permit Missing .
Read out the rejection reason on the Certificate of Origin.	<i>"When we reject a document, we must say why. The reason stays on the record, and the person fixing it knows exactly what to do."</i>	"Signature block expired" and the Replace button.
Click Review on the Bill of Lading, then Approve .	<i>"One click and the Bill of Lading is approved."</i>	Message Bill of Lading approved . Button becomes View.
Open the Tasks tab. On Verify shipment documents complete (tagged evidence required) click Complete , add no file, and click Mark complete .	<i>"Some steps need proof. If you forget the file, the system will not let you mark it done."</i>	Message Attach the completion evidence first . The task stays Pending.

ACT 4 | The manager's morning

Manager (Grace Tan) | about 2 min

Goal: Show the one-screen picture of the business and that each card leads to the problem.

Do (click path)	Say (talk track)	Point out
Avatar menu, Demo: switch role , choose Manager . You land on the Dashboard .	<i>"Grace is the operations manager. This is what she sees first thing in the morning."</i>	Subtitle: Management visibility across every shipment job .
Point across the six cards.	<i>"Twelve active jobs, including the one we just created. One overdue task, twelve missing or rejected documents, five of them on the new job. One open problem, two jobs ready to go to Finance, and one job short on funds."</i>	Cards: Active jobs 12, Overdue tasks 1, Missing / rejected docs 12 (7 plus the new job's five), Open exceptions 1, Billing ready 2, Jobs short on funds 1. On a fresh page, without Act 1, they read 11, 1, 7, 1, 2, 1.
Scroll: Workload per user , then Overdue tasks .	<i>"Who is overloaded, and what is late, by name and job."</i>	Overdue: Lodge customs entry, owner Cathy Lim, due 24 Sep.
Click a row in Open exceptions (SJ-2026-00065).	<i>"Every line is clickable. It takes you straight to the problem. Let us look at that one."</i>	It opens the job on the Exceptions tab. Continue to Act 5.

ACT 5 | Customs and things going wrong

Dispatcher, then Manager | about 4 min

Goal: Show that delays are visible, someone owns them, and only the right people can release a hold.

Do (click path)	Say (talk track)	Point out
On SJ-2026-00065 (Exception tab) point at the pending exception. Click Client tracking page , then Back.	<i>"This shipment has a problem: the commodity code on the invoice does not match the customs entry. The job is paused. The customer sees a calm message, not our internal details."</i>	Customer page: Your shipment is delayed and Action needed from you (duties waiting on the client). The HS code detail is <i>not</i> shown.
Exceptions tab, click Review . Corrective task: Re-issue commercial invoice with matching HS code , owner Cathy Lim . Click Approve & assign .	<i>"The manager approves, assigns the fix to a named person, and the job is released."</i>	Message Exception approved; task assigned to Cathy Lim . Job returns to Customs Clearance. Dashboard Open exceptions falls to 0.
Open SJ-2026-00130 as Manager. Read the Customs Clearance panel.	<i>"Customs picked this container for a physical inspection: a Red lane. That is common and takes days, so we make it impossible to miss."</i>	Under Inspection in red; the lane selector and Clear hold button.
Optional (30 seconds, strong for the roles message): avatar menu, switch to Dispatcher , open the same job, then switch back to Manager .	<i>"A dispatcher sees the hold but cannot clear it. Only a manager or admin can."</i>	No lane selector and no Clear hold button for the Dispatcher.
As Manager click Clear hold , then Advance customs stage twice. At Payment Pending choose Waiting on: Client .	<i>"The customs process has seven small steps. At payment, the system asks whose move it is. If the client has to release funds, it says so, so we stop chasing the wrong person."</i>	Warning Waiting on Client .

ACT 6 | Delivery from the floor

Warehouse Crew (Ben Santos) | about 2.5 min

Goal: Show the simple field view and that delivery cannot be confirmed without proof.

Do (click path)	Say (talk track)	Point out
Avatar menu, Demo: switch role , choose Warehouse Crew . You land on My Tasks .	<i>"Ben works in the warehouse, often on a phone or tablet. He sees a short list: his tasks and deliveries waiting to be confirmed. Nothing else."</i>	Heading My Tasks Ben Santos Warehouse Crew . Sidebar has only My Tasks and Shipment Jobs.
Open Shipment Jobs .	<i>"Ben only sees the four jobs assigned to him. Not the company's whole book."</i>	SJ-2026-00101, 00095, 00077, 00065.
Back on My Tasks click Confirm + POD on SJ-2026-00077 . In Received by type nothing, and click Confirm delivery .	<i>"Let us try to confirm with no name. The system refuses."</i>	Message Enter who received the delivery .
Type J. Ramos (Receiving) , leave the file empty, confirm again.	<i>"Now no proof file. Still refused. Delivery must be proven."</i>	Message Attach the proof of delivery before confirming .
Attach any file as proof, keep the damage switch off, and click Confirm delivery .	<i>"Done in one tap: delivered, with who received it and the proof attached."</i>	Message Delivery confirmed in full . The job becomes Delivered. Optional line: "the customer now sees Delivered, the receiver and the proof."

ACT 7 | The client's money

Manager, then Finance (Paolo Reyes) | about 5 min

Goal: Show the money notebook, the funding warning, the surprise-charge check and the clean handoff to Finance.

Do (click path)	Say (talk track)	Point out
Switch role to Manager . Open SJ-2026-00120 , Charges tab.	<i>"To release a shipment, we pay duties and freight first and bill the client back, like a personal shopper paying up front. This notebook tracks it: money in, money spent, what is left."</i>	Money in / Money spent / Left over: PHP 106,000 / 96,000 / 10,000 and the ledger with running balance.
Point at the amber banner and the Short on funds chip in the job header.	<i>"Here is the warning. The duty of PHP 18,400 is due on 30 September. The client only has PHP 10,000 with us. We are short by PHP 8,400, and storage fees start in two days. We know now, not after the fees start."</i>	Banner: Short by PHP 8,400.00, storage fees start in 2 days .
Click Add funds received : date 28 Sep 2026 , amount 10000 , method Bank transfer, reference BT-999001, attach a file, Save deposit .	<i>"The client sends the money. Watch the warning."</i>	Banner and chip disappear. Dashboard Jobs short on funds shows 0.
Open SJ-2026-00070 , Charges . Point at Needs client approval and Receipt missing .	<i>"This job has two traps. A storage fee that was never in the quotation, and a payment with no receipt. Without this system, nobody notices and the company absorbs the cost."</i>	Not in quotation tag on Extra storage fee (PHP 6,800); Receipt missing on Port handling fee; refund shown as Not final yet .

Do (click path)	Say (talk track)	Point out
Click Client approved on the Extra storage fee. Open Tasks and complete Return empty container . Back on Charges, read the checklist, click Mark Ready for Finance .	<i>"A manager either gets the client to approve the extra cost, or absorbs it with a written reason. Only when the checklist is complete can the job be handed to Finance."</i>	Message SJ-2026-00070 is billing ready . Dashboard Billing ready becomes 3. (Presenter option: use Absorb cost with a reason instead to show margin going negative.)
Avatar menu, switch to Finance . Open SJ-2026-00060, Charges , then Open Billing Summary .	<i>"Paolo in Finance sees a read-only view. He cannot change anything, only receive a clean, complete package: what the client sent, what we spent, our fees and the refund due."</i>	Sidebar shows only Dashboard, Shipment Jobs, Audit Trail; job tabs only Overview and Charges. Refund due to client: PHP 16,100. Mock document tag.
Click Print / Export . Then open SJ-2026-00101 and click Download PDF .	<i>"Prints as a clean page. This is a summary for Finance, deliberately not an invoice. Real invoicing stays in whatever accounting system the company already uses."</i>	Print preview shows only the document. The PDF for SJ-2026-00101 is the one real file. Close the print preview with Cancel. See the margin note under "Before you present".

ACT 8 | Accountability

Admin (Mark Villar) | about 1.5 min

Goal: Show the audit trail with a date filter, and who may see what.

Do (click path)	Say (talk track)	Point out
Avatar menu, switch to Admin . Sidebar: Audit Trail .	<i>"Every action is recorded: who, what and when. With thousands of records you do not scroll; you filter."</i>	Newest first, 25 rows per page, actor shown as the real person with their role.
Open the date picker. Click 10 then 12 September, Done .	<i>"A calendar range, or presets like Last 7 days."</i>	Label Sep 10, 2026 - Sep 12, 2026; 9 events in range .
Click Clear . Find the Act 2 entry: Status changed for SJ-2026-00088.	<i>"Here is the status change we made a few minutes ago. And here, the exception approval, the funds, the charge decision. Everything traced to a person."</i>	Actor shows the person who did it, for example Ana Cruz (Dispatcher). It is within the first pages, newest first.
Open Users & Roles . Point at the permission matrix.	<i>"And this is how we control who can see what. Warehouse staff never see money. Finance cannot edit. Only an admin manages users."</i>	Seven people; matrix marked Illustrative because final rules are still to be agreed.

Act 9 | Close (1.5 min)

Say: *"In about 25 minutes you saw one shipment's life: a quote becoming a job, the customer seeing status, paperwork caught before it delays us, customs delays with an owner, delivery with proof, the client's money tracked with warnings before fees, and a clean handoff to Finance, all traced. This is a mockup with sample data. The rules and wording are what we want your feedback on. Real operations may differ from what we assumed, and the first weeks of the project are for confirming them with you."*

Ask: "Which of these steps most matches how you work today? Which does not?"

What we are not showing (say it before someone asks)

- No real accounting: no ledger, tax calculation, payment or bank link. The funds notebook is per job, for handoff to Finance.
- No connection to the Bureau of Customs, shipping lines or ports. Statuses are entered by staff.
- Emails are illustrations; nothing is sent. Sign-in is simulated. Nothing is saved.
- Final roles and permissions, and the exact list of statuses, are still to be confirmed with the client.

Likely questions and honest answers

If they ask	Suggested answer
Is this the real system?	No. It is a working mockup with sample data, to agree the flow and wording before building. Nothing is saved.
Will it connect to our accounting software?	Not in this mockup. The idea is a clean handoff package to Finance. Whether and how to connect to your accounting tool is something we would confirm in the first weeks.
Can customers log in?	Today they use a public tracking page with no account. A real system would make the link secure and expiring (known issue KL-12).
Does it work on phones?	The field view is designed for phones and tablets, and we tested tablet and phone widths. It is a mockup, so we would validate on real devices.
Can a dispatcher see all jobs?	Today the job list shows all jobs to a dispatcher and only the dashboard is limited. This is an open decision for you (KL-09).
Who can move a job's status?	Today anyone who can open the job, except Finance. We would agree the exact rule with you (KL-10).
What happens when goods arrive damaged?	Delivery can be confirmed with damage noted and billing stays blocked. A resolution step is not built yet and needs your process (KL-04).
Are these statuses and customs steps exactly ours?	They follow the blueprint and standard customs brokerage practice. We want your corrections; that is the purpose of the first weeks.
Can it read customs (BOC) data automatically?	Not in scope of this mockup and not implied. Staff enter status updates.
How long, how much?	Do not quote figures from this script. Say the timeline and cost are set after the discovery weeks.

If something breaks live

- Nothing happens when you click? Press **Esc** to close any open panel, then retry.
- Wrong job or wrong role? Use the avatar menu, or the sidebar, to go back. Nothing is permanent.
- The numbers no longer match this script? An earlier click changed the data. Press **F5**, sign in again and restart from the act you were on.
- Say calmly: "This is a mockup, so I will reset it," and continue. Presenters who stay relaxed lose nothing.

Shorter versions

Version	Acts to run	Time
Executive (10 min)	0, 2 (customer view only), 4, 5 (exception and customs hold only), 7 (short on funds and Billing Summary only), 9	10 min
Operations focus (15 min)	0, 1, 2, 3, 5, 6, 9	15 min
Finance focus (12 min)	0, 4, 7, 8, 9	12 min
Full (27 min)	All acts	27 min

Every click path in this script comes from a test case in the workbook (for example DSP-14 to 17, DSP-24, DSP-40, MGR-05, MGR-10, WHC-06 to 08, MGR-19, MGR-20, MGR-27, MGR-30, FIN-14, FIN-16, ADM-12, ADM-15 and journey E2E-01). If a step does not behave as written here, check the matching test case for the exact expected result.
